PROFESSIONAL SUMMARY

Flutter Developer with 5+ years of production-level experience architecting and shipping cross-platform mobile applications for iOS and Android, including full ownership of app store release cycles for 10+ published products. Deep expertise in Clean Architecture, BLoC and Riverpod state management, Dart internals, and offline-first data synchronisation. Experienced integrating Flutter with native Android modules (Kotlin/Gradle) and third-party SDKs, building disciplined unit/widget/integration test suites, and running CI/CD pipelines through GitHub Actions and Codemagic for continuous delivery. Comfortable operating as a sole mobile owner from architecture through production monitoring, and equally effective embedded in a team, collaborating closely with backend, QA, and design to ship maintainable, well-tested code.

TECHNICAL SKILLS

Mobile: Flutter (5 years), Dart, iOS and Android, cross-platform development

State Management: BLoC, Riverpod, Provider

Architecture: Clean Architecture, feature-first modular structure, SOLID, dependency injection, codebase auditing and refactoring

Native Integration: Platform channels, Add-to-App, Kotlin/Gradle build configuration, native Android module integration

Testing: Unit, Widget and Integration Testing, TDD discipline, Crashlytics, Firebase Analytics

Offline and Sync: Hive, local caching, offline-first architecture, complex data synchronisation

Backend and APIs: RESTful APIs, WebSockets, Firebase (Auth, Firestore, Cloud Functions, FCM)

UI: CustomPainter, custom animations, micro-interactions, responsive layouts, pixel-perfect Figma-to-Flutter

Performance: Flutter DevTools, memory profiling, widget rebuild optimisation, rendering pipeline tuning

CI/CD: GitHub Actions, Codemagic, Fastlane, App Store Connect, Google Play Console

Payments: Stripe, Paystack, Flutterwave

Collaboration: Remote async collaboration, code reviews, technical mentorship, Agile/Scrum

PROFESSIONAL EXPERIENCE

Founder & Lead Flutter Developer | SalesSync (POS & Business Management App) *(Personal Project)* Apr 2026 – Present

- Sole architect and developer of a full-stack Flutter POS platform, building dual-role access (owner and salesperson) with Firebase backend, BLoC state management, and Clean Architecture from the ground up
- Implemented a fully offline-first architecture using Hive for local caching with automatic sync to Firestore on reconnection, so the app keeps working with no internet
- Integrated hardware POS terminal support for Sunmi, PAX, and Moniepoint devices, building thermal printing pipelines and automated PDF receipt and invoice generation with WhatsApp and email sharing
- Engineered real-time inventory and sales tracking across both roles, with role-based dashboards and reporting

Senior Flutter Developer | Campus Shield (SOS App) *(Freelance Contract)* Jan 2026

- Sole mobile developer for a campus emergency safety alert system, delivering role-based routing for students, staff, and admins on iOS and Android
- Integrated Firebase Auth, Firestore, and FCM HTTP v1 with OAuth2 JWT for real-time alert delivery, with SMS fallback via url_launcher for degraded network conditions
- Built live GPS tracking and in-app emergency alarm features with map navigation URI integration for first-responder routing

Senior Mobile Developer | Beyond Tech - Borofuel *(Remote Contract)* Oct 2025 – Dec 2025

- Primary mobile owner for a driver-assistance Flutter platform, leading architecture, feature development, and deployment to both stores
- Eliminated frame drops and memory pressure through Flutter DevTools profiling, resolving widget rebuild inefficiencies and memory leaks
- Worked with backend engineers to shape API response structures and real-time WebSocket event schemas

Senior Mobile Developer | HEZMART *(Remote Contract)* Jun 2025 – Aug 2025

- Sole owner of a feature-rich e-commerce Flutter app: architecture, multi-gateway payment integration, real-time cart management, and full store deployment
- Sustained minimal transaction failure rates across high volumes by integrating two payment gateways with robust error handling and retry logic
- Resolved native Android build failures by debugging Kotlin/Gradle version conflicts in `webview_flutter_android`, restoring release APK stability

Senior Mobile Developer | Beyond Tech - WorkAndShop *(Remote Contract)* *Feb 2025 – Jun 2025*

- Delivered a multi-vendor e-commerce MVP as primary mobile owner, from architecture through dual-store launch using Clean Architecture and BLoC
- Built a comprehensive unit, widget, and integration test suite across core business logic and UI flows, reducing regression risk across release cycles
- Optimised rendering performance across Android and iOS device ranges for consistent UI fidelity on low-spec devices

Mobile Developer | De-Developer - PollSensei *Jun 2024 – Dec 2024*

- Architected a cross-platform Flutter survey app with real-time analytics dashboards, audio response collection, and multi-gateway payments (Stripe, Flutterwave, Paystack) using optimised BLoC event streams
- Defined and refined REST API contracts with the backend team, improving data consistency
- Monitored production stability with Firebase Crashlytics, resolving critical issues rapidly after release

Mobile Developer (Intern → Intermediate) | Programmer's City - Dap Game *Mar 2021 – Jun 2024*

- Sole mobile developer for a real-cash competitive gaming Flutter app with physics-driven gameplay and third-party API integrations
- Maintained disciplined unit and widget test coverage across the Dart codebase for stable, regression-free releases

Mobile Developer (Intern) | LiteResults Services - ShapCab *Mar 2022 – Dec 2022*

- Integrated Google Maps SDK and real-time location tracking APIs into a ride-hailing Flutter app, gaining hands-on experience with background services and live data streams
- Supported integration and UI testing pipelines ahead of production releases

PERSONAL PROJECT

Founder & Lead Flutter Developer | PackageMe *(Personal Project)*

- Sole mobile owner for a full-stack e-commerce Flutter application, leading architecture through App Store and Play Store submission
- Designed a flexible multi-tier vendor marketplace with end-to-end ordering flows and secure Django REST API integration
- Implemented offline caching and data sync using local storage strategies for seamless UX under poor network conditions

EDUCATION

Bachelor of Science, Computer Science

Admiralty University of Nigeria - September 2022
