

CHUKWUEZUWOM GIDEON MOSES

Senior Flutter Developer | iOS and Android | Cross-Platform Mobile

mosesgideon072@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | English (Fluent)

PROFESSIONAL SUMMARY

Senior Flutter Developer with 5+ years of production-level experience architecting and shipping high-quality cross-platform mobile applications for iOS and Android. Proven track record as sole mobile owner on multiple products, taking apps from zero to App Store and Play Store release. Deep expertise in Clean Architecture, BLoC/Riverpod state management, Firebase, REST API integration, offline-first architecture, and performance optimisation. Experienced working remotely on project-basis and long-term contracts, collaborating closely with backend, QA, and design teams to deliver scalable, maintainable products.

TECHNICAL SKILLS

Mobile: Flutter (5 yrs), Dart, iOS and Android, cross-platform development

Architecture: Clean Architecture, feature-first modular structure, codebase auditing and refactoring

UI: CustomPainter, custom animations, micro-interactions, responsive layouts, pixel-perfect Figma-to-Flutter

State Management: BLoC, Riverpod, Provider

Offline and Sync: Hive, local caching, offline-first architecture, complex data synchronisation

Backend and APIs: RESTful APIs, WebSockets, Firebase (Auth, Firestore, Cloud Functions, FCM), Django REST Framework

Performance: Flutter DevTools, memory profiling, widget rebuild optimisation, rendering pipeline tuning

CI/CD: GitHub Actions, Fastlane, App Store Connect, Google Play Console

Testing: Unit, Widget and Integration Testing, Crashlytics, Firebase Analytics

Payments: Stripe, Paystack, Flutterwave

Soft Skills: Remote async collaboration, code reviews, technical mentorship, Agile/Scrum

PROFESSIONAL EXPERIENCE

Senior Flutter Developer | **SalesSync** *[Personal Project]* Apr 2026 – Present

- Sole architect and developer of a full-stack Flutter POS and business management application, building dual-role access (owner and salesperson) with Firebase backend, BLoC state management, and Clean Architecture from the ground up.
- Implemented a fully offline-first architecture using Hive for local caching with automatic sync to Firestore on reconnection, ensuring the app functions completely without internet connectivity.
- Integrated hardware POS terminal support for Sunmi, PAX, and Moniepoint devices, building thermal printing pipelines and automated PDF receipt and invoice generation with WhatsApp and email sharing.
- Engineered real-time inventory and sales **tracking** across both roles, with role-based dashboards, transaction history, and reporting features tailored per user type.

Senior Flutter Developer | **Campus Shield (SOS App)** *[Freelance]* Jan 2026

- Sole mobile developer for a campus emergency safety alert system built for Admiralty University of Nigeria, delivering role-based routing for students, staff, and admins on iOS and Android.
- Integrated Firebase Auth, Firestore, and FCM HTTP V1 with OAuth2 JWT for real-time emergency alert delivery, ensuring notifications reached all users even under degraded network conditions via SMS fallback through url_launcher.
- Built live GPS tracking and in-app emergency alarm features using audioplayers and flutter_tts, with map navigation URI integration for first-responder routing.
- Implemented offline fallback mechanisms to keep core alert functionality available without active internet, maintaining safety reliability in all conditions.

Senior Mobile Developer | **Beyond Tech, Borofuel** *[Project Contract]* Oct 2025 – Dec 2025

- Primary mobile owner for a driver-assistance Flutter platform, leading architecture, all feature development, and full deployment to App Store and Play Store.
- Eliminated frame drops and memory pressure through deep Flutter DevTools profiling, resolving widget rebuild inefficiencies and memory leaks across the app.
- Worked closely with backend engineers to shape API response structures and real-time WebSocket event schemas for fuel request and approval flows.

Senior Mobile Developer | **HEZMART** *[Project Contract]* Jun 2025 – Aug 2025

- Took sole ownership of a feature-rich e-commerce Flutter app, managing architecture, multi-gateway payment integration, real-time cart management, and full App Store and Play Store deployment.
- Sustained minimal transaction failure rates across high volumes by integrating two payment gateways with robust error handling and retry logic.

Senior Mobile Developer | **Beyond Tech, WorkAndShop** *[Project Contract]* Feb 2025 – Jun 2025

- Delivered a multi-vendor e-commerce MVP as primary mobile owner, from architecture through dual-store launch using Clean Architecture and BLoC.
- Built a comprehensive unit, widget, and integration test suite across all core business logic and UI flows, reducing regression risk across release cycles.
- Optimised rendering performance across Android and iOS device ranges, achieving consistent UI fidelity on low-spec devices.

Senior Mobile Developer | **De-Developer, PollSensei** *[Remote Contract]* Jun 2024 – Dec 2024

- Architected a cross-platform Flutter survey application with real-time analytics dashboards, audio response collection, and multi-gateway payments (Stripe, Flutterwave, Paystack) using optimised BLoC event streams.
- Collaborated with the backend team to define and refine REST API contracts, improving data consistency and reducing mobile-side error handling complexity.
- Monitored production stability with Firebase Crashlytics, resolving critical issues rapidly after release and maintaining a high crash-free user rate.

Mobile Developer | **Programmer's City, Dap Game** Mar 2023 – Jun 2024

- Sole mobile developer for a real-cash competitive gaming Flutter app with physics-driven gameplay and third-party API integrations, maintaining high user retention through consistent, quality releases.
- Maintained disciplined unit and widget test coverage across the Dart codebase, ensuring stable, regression-free releases on all supported devices.

Mobile Developer (Intern) | **LiteResults Services, ShapCab** Mar 2022 – Dec 2022

- Contributed to a ride-hailing Flutter app by integrating Google Maps SDK and real-time location tracking APIs, gaining hands-on experience with background services and live data streams.
- Supported integration and UI testing pipelines, maintaining quality standards ahead of production releases.

PERSONAL PROJECT

Senior Flutter Developer | **PackageMe**

- Sole mobile owner for a full-stack e-commerce Flutter application (iOS and Android), leading all architecture decisions through to App Store and Play Store submission.
- Designed a flexible multi-tier vendor marketplace with end-to-end ordering flows and secure Django REST API integration, enabling an on-schedule client launch.
- Implemented offline caching and data sync using local storage strategies, ensuring seamless UX under poor network conditions.

EDUCATION

Bachelor of Science, Computer Science
